

A revolution in badminton teaching and training

The revolutionary Knight Trainer from Black Knight allows players of all levels to learn, improve and perfect badminton skills dramatically faster than in the past.

The Knight Trainer is a compact, transportable shuttle launcher that delivers a wide range of shots and levels of difficulty. The Knight Trainer frees up the coach to observe a player's movements and technique, enabling the coach to correct and teach skills more quickly and more effectively.

With the Knight Trainer's steady feed, a player can rapidly improve accuracy, consistency and technique. Coaches are able to measure the progress of a player's skills on a uniform basis.

Features and Settings

- The Knight Trainer is quick to set up or to store, and can feed both feather and nylon shuttlecocks, with a wide range of positions and settings. It is sold with 3 feeding tubes that can hold 50 shuttles each. Tubes are switched quickly and easily during use.
- Players can train against multiple smashes, drives, fast drops, slow drops, net shots, clears, short serves, long serves, smash returns and more, all fed consistently. Elite players can perfect all of the shots in their repertoires and can use their creativity to develop new shots.
- Coaches can **manually vary** the shot angle or direction while the player trains.

Developed and manufactured in Quebec, Canada by Black Knight, the revolutionary Knight Trainer allows players to learn, improve and perfect badminton skills far faster than in the past, freeing coaches to concentrate on the player and not on the feeding.

- With the **remote control**, at the touch of a button the player or coach can start and pause firing and change velocity and frequency.

- The firing **height** can be set anywhere between 54" and 82". An optional low stand will also allow a height setting of 36".

- The shot **angle** can easily be set at any point from a sharply angled smash to a soaring clear or long serve.

- **Firing frequency** can be set at any rate between approximately 2.5 shuttles per second and 1 shuttle per 16 seconds.

- **Velocity** can vary from the most delicate of net shots to challenging smashes, according to the

position on court.

- **Calibrations** for height, angle, velocity and frequency can be noted, so that the same shot can quickly be set up again at other times.
- **Two Knight Trainers** can be connected to work together, feeding alternately, each machine set up for a different shot.
